Execution Instructions:

Before running the workload_generator, please login to the WebTierServer EC2 instance using the provided WebTierKey.pem file WebTierKey.pem.

Here is the command to login.

```
ssh -i "WebTierKey.pem" ec2-user@ec2-52-201-219-109.compute-1.amazonaws.com
```

Then activate the virtual environment by running the below command.

```
source env/bin/activate
```

Then enter the below command to run the webApp.py script which will start the flask API.

```
cd webTier/
python3 webApp.py
```

That's it. You can now run the workload generator script.
